Open Access has long-term value

As the prices of conventional journals spiral out of control and become unsustainable, your options of accessing high-impact journal material will diminish. OA Research provides a positive alternative for you to find top, current research soon after it has been published. You may use Open Access and Open Educational Resources for research and teaching purposes, where possible. This will reduce the number of copyright clearances you need to make for teaching purposes.

You will not have to write to authors for copies of their papers, wait for their replies, or apply for copyright and pay high copyright fees to access material. It will all be available online, open and immediately, with no charges. You will be able to share articles with colleagues, students and other information users inside and outside South Africa, without any concerns about copyright infringement. You can reduce the number of copyright permissions needed for research purposes or electronic theses/dissertations.
